

PRESS RELEASE

Bourgoin-Jallieu, November 5, 2018

ENERSENS enters a new phase of its development

ENERSENS, a European company specialized in the development of high-performance insulating materials, announces that a group of French private investors took control of 100% of its capital on July 30 2018, following discussions initiated in the second quarter with the former shareholders.

This new ownership ensures the company will continue the development of its **breakthrough technology** and **highly innovative products** for a growing market.

ENERSENS is based in Bourgoin-Jallieu, on an industrial site belonging to the PCAS Group.

According to Mr. Denery FENOUIL, the new President of the company, « *the operation allows ENERSENS to continue its ambitious development, thanks to the dynamism of its team and the positioning of its products* ».

About ENERSENS:

With 8 years of R&D in collaboration with academia, ENERSENS is the specialist in **high performance thermal insulation**. The company manufactures innovative silica aerogel products with a wide range of applications in the building, industrial and transportation sectors.

About silica aerogel:

It is the **best thermal insulation material known** to date. It also exhibits other important characteristics such as acoustic damping and crucially **does not release toxic smoke** in the event of fire. In addition, silica aerogel is **more stable over time** than the majority of traditional insulation materials.

The new production processes developed by ENERSENS are unique and based on a solid portfolio of patents. This enables the manufacture of these innovative new products at **competitive costs**. Enersens vision is to replace less efficient, traditional, insulation products - especially those dependent upon oil resources.

The high performance insulation market is growing rapidly worldwide.
